VM series

Vertical Machining Center Ideal for Mold Processing

Low-vibration built-in spindle and highest stroke in its class. Designed for both roughing and finishing, the VM Series provides a product line-up ranging from Unit 7 to Unit 12 sizes. The new design boasting improved operator convenience and work efficiency will raise users' productivity and create added value.

22 Customer Support Service

Broad product line-up designed for diverse requirements

Complete line-up ranging from Unit #7 to #12 sizes.

- VM 750 (L) / VM 960 (L) / VM 1260

Highest reliability realized with a wide range of spindle speeds and excellent quality

- Dual contact spindle (standard)
- Gear type 6000 rpm / 8000 rpm
- Built-in type 12000 rpm

Control solution for processing high-quality molds

- High-speed, high-precision contour control
- Tool monitoring
- Optimal feed control

Basic Structure

High feedrate and precision have been realized with the adoption of a stable C-type column structure and bed design.

Rigid Construction for Heavy Duty Applications

- The rigidity is increased by effectively arranging the box type structure of bed, column and saddle.
- Rigidity and stability are assured with the wide box guide structure.
- The spindle head is supported by the wide guide way for the stable cutting performance.
- Wide z-side slide and wide y-side transport support prevent skewing and make it suitable for powerful, heavy cutting.

Exceptionally Durable All-in-One Single Frame Construction

The wide bed slide is heat-treated with high frequency providing outstanding performance during heavy duty cutting operations.

Radial Rib Structure

The processing is improved with the reduced weight and absorbed vibrations during heavy duty cutting.

Coolant Recirculation System

The cleanliness and service life of the coolant have been improved.

Feed Shaft / Tool Magazine

Equipped with wide box-type guideways and a large-capacity tool changer.

Rapid Traverse

The adoption of a wide box guide structure delivers greater rigidity and stability. The entire upper surface of the saddle is equipped with slide bearings and oil grooves to prevent friction and wear.

Rapid traverse rate

VM 750 (L) **20 / 20 / 20** m/min (787.4 / 787.4 / 787.4 ipm)

VM 960 (L) **16 / 16 / 16** m/min (629.9 / 629.9 / 629.9 ipm)

VM 1260 **12 / 12 / 12** m/min (472.4 / 472.4 / 472.4 ipm)

Rapid traverse rate

Large diameter ball screw for powerful cutting

Fitted with high-precision, fixed ends, pre-tensioned double anchor structure ball screw. The nut is cooled on the outer rim to minimize thermal error, while direct-coupled structure delivers rapid responsiveness and excellent rigidity.

Minimized Idle Time

A high-speed cam-type tool changer has been adopted as a standard feature to deliver higher productivity. The loop-type magazine on the left side of the machine stores 40 tools as standard, and can be extended.

Minimized Idle Time

Tool change time (T-T-T)

2.5sec.

Table

Basic type and long type table specifications are available in addition to diverse machining solutions.

Table

The extended X axis travel distance allows the setting up and cutting of wider workpieces of various shapes.

Largest work area in its class

X-axis x Y-axis

VM 750 (L)

1600 x 800 (1900 x 800)mm
(63.0 x 31.5 (74.8 x 31.5) inch)

VM 960 (L)

2400 x 950 (2600 x 950)mm
(94.5 x 37.4 (102.4 x 37.4) inch)

VM 1260

2800 x 1260mm
(110.2 x 49.6 inch)

Greatest table loading capacity in its class

VM 750 (L)

3000 (3500)kg
(6613.8 (7716.1) lb)

VM 960 (L)

4000 (4500)kg
(8818.4 (9920.7) lb)

VM 1260

8000kg
(17636.7 lb)

Spindle

The stable thermal-displacement-preventive structure minimizes spindle taper error at high speed. The wide range of speeds and excellent quality of the spindle guarantee the highest reliability.

Gear Type

- **Powerful cutting of large workpieces:** Powerful processing capability of large workpieces with maximum torque is offered by 2-stage gear drive.
- **High-speed tapping:** Standard adoption of rigid tap allows high speed tapping without the tap holder.
- **High rigidity and stability:** Rigid angular contact bearing is adopted to assure rigidity and stability by maintaining the rigidity even during heavy duty cutting.

Max. spindle speed

6000 r/min 8000 r/min option

Motor (30 min/cont.)

VM750 (L), VM 960 (L)

18.5 / 15 kW
(24.8 / 20.1 Hp)

VM 1260

22 / 18.5 kW
(29.5 / 24.8 Hp)

Dual contact spindle

Dual contact spindle (BIG PLUS) adopted as a standard feature

Built-in Type option

Max. spindle speed

12000 r/min

Motor (30 min/cont.)

30 / 25 kW
(40.2 / 33.5 Hp)

• Rigid and precise spindle

Adoption of 100 diameter rigid ceramic bearing and oil supply (oil mist) method assure high precision even during the extended time of high speed rotation.

• Highest speed spindle in its class

Adoption of low vibration built-in motor offers optimum molding with the highest spindle speed (12000 r/min) and the highest torque of 419.44 N·m (309.5 ft-lb) in its class.

Easy Chip Disposal

Built-in spiral-type coil conveyor at front and rear of the machine

Lift chip conveyor for fast chip disposal (VM 1260)

Diverse Options

Numerous options are offered for greater efficiency and customer convenience.

Coolant Gun option

Coolant gun helps keeping the work environment clean.

Through-spindle coolant spray system

Oil skimmer

Optimized Tool Processing Solution

Superior surface finishes and machining accuracy are achieved through using standard processing solutions such as high-speed / high-precision contour control and thermal displacement compensation.

DSQ High Speed / High Precision Contour Control

* DSQ : Doosan Super Quality

- **DSQ1**
(AICC2 _ 200 Block + Machining condition selection function)
- **DSQ2** option
(DSQ1 + Data server [1GB])
- **DSQ3** option
(DSQ2 + High speed processing _ 600 Block)

DAFC The Optimal Feed Control option

* DAFC : Doosan Adaptive Feedrate Control

Optimal feed control is ensured by real-time spindle load detection.

DTMM Tool Load Monitoring System (DTMM*) option

* DTMM : Doosan Tool load Monitoring for Machining Centers

The technology of protecting tool and machine in abnormal load during the cutting process

- ✓ Detection cycle = Program interpolation cycle
- ✓ Automatic stop when an abnormal load is detected
- ✓ Select an alternative tool and command to NC

DSTC Smart thermal displacement multi compensation technology

* DSTC : Doosan Smart Thermal Control

Realizes high-quality, high-precision machining with smoothing thermal displacement compensation of the spindle and structure.

Compensation of static displacement of spindle

Compensates changes in tool position caused by expansion of the spindle shaft at high speed.

Structure thermal displacement compensation

Compensates irregular deflection or expansion of the structure due to ambient temperature using a multiple temperature sensors.

Compensation of structure thermal displacement

Thermal error of the spindle caused by heat accumulation is compensated with 5 algorithms including a smoothing function.

Without smoothing

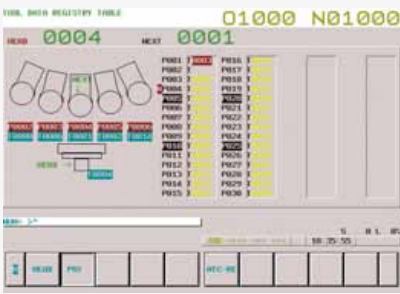

With smoothing

Easy Operation Package

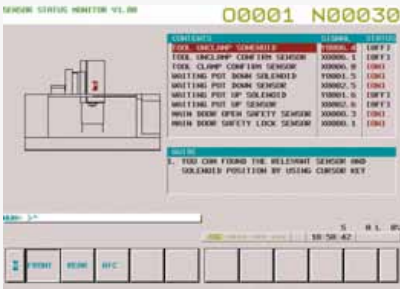

Operation / Maintenance

These Doosan software packages have been customized to provide fast and easy setup of tooling, workpiece, and program. These functions minimize the idle time caused by process setup and maximize the machine's productivity.

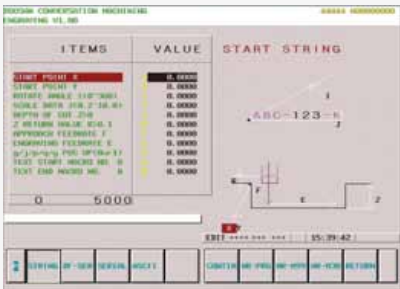

Tool Data Registry Table

Displays the information on the tools in the pot in 2D graphics.

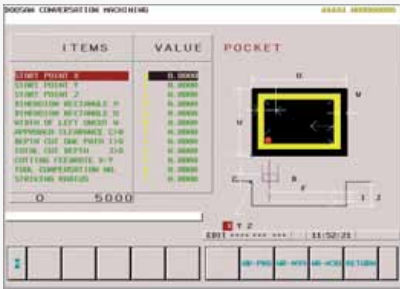

Engraving option

Allows character engraving on the workpiece.

ATC Recovery Help

When ATC is stopped (malfunction or emergency), this function guides the operator to recover the machine back to its normal state.

Renishaw Gui (Tool measure)
(Work measure option)

Enables automatic measurement of tool length, tool diameter, and work coordinates, and detects tool damage using an interactive method.

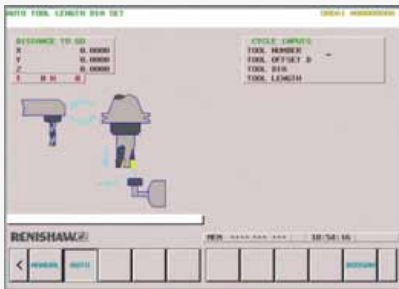

Sensor Status Monitor

Shows solenoid valve and sensor status without the electric diagram.

Pattern Cycle

Pattern cycle programs can be created using an interactive way of parameter input.

Tool Load Monitor option

Detects tool damage and wear by setting limits on the load for spindle and axis to minimize mechanical damages.

Calculator

Provides all functions of a general calculator plus automatic calculation of cutting size and conditions.
